WELCOME

How to use this guide

A gentle seven-day habit guide for meals, drinks, movement, sleep, tracking, and next-week planning. It is designed for ordinary days, imperfect schedules, mixed budgets, and real families.

Use it for education

This guide cannot diagnose, treat, or replace medical care. Individual needs vary, and medicines or insulin should not be changed based on a PDF.

Contents

03	Welcome and safety	12	Day 7: prepare next week
04	How habits work	13	Hydration tracker
05	Seven-day overview	14	Movement tracker
06	Day 1: notice your starting point	15	Meal and fiber tracker
07	Day 2: build one balanced meal	16	Sleep check-in
08	Day 3: add fiber	17	Mood and energy
09	Day 4: break up sitting time	18	Optional glucose notes
10	Day 5: improve one drink	19	Obstacles and backup plans
11	Day 6: protect sleep	20	30-day continuation

WELCOME AND SAFETY

Welcome and safety

This reset is not a detox, cleanse, crash diet, or promise. It means pausing for one week, noticing patterns, and choosing a few routines that can support metabolic health.

- Do not change medication or insulin without your care team.
- If activity is unsafe for you, ask what movements fit.

HOW HABITS WORK

How habits work

Seven-day roadmap

Habits often need a cue, a routine, and a reward. The smaller the routine, the easier it is to repeat when life gets busy.

- Tie a new habit to something you already do.
- Make backup plans part of the habit.

SEVEN-DAY OVERVIEW

Seven-day overview

Each day asks for one main action. You can repeat a day, skip a day, or adapt the plan. The point is learning, not proving anything.

- Notice.
- Build one meal.
- Add fiber.
- Break up sitting.
- Improve one drink.
- Protect sleep.
- Plan next week.

Try this

Choose one small action from this page and test it for one ordinary day. Keep what helps and adjust what does not.

DAY 1: NOTICE YOUR STARTING POINT

Day 1: notice your starting point

One balanced meal

Record a normal day without judgment.
Notice drinks, meals, movement, sleep,
energy, mood, and one thing that felt hard.

- Choose one realistic goal.
- Keep private health notes secure.

DAY 2: BUILD ONE BALANCED MEAL

Day 2: build one balanced meal

Use the Mindful Plate method for one meal only. Add vegetables, protein, carbohydrate, and a low-sugar drink if possible.

- One meal is enough.
- Mixed dishes can still count.

DAY 3: ADD FIBER

Day 3: add fiber

Movement menu

Add one fiber source such as beans, lentils, oats, berries, vegetables, whole grains, nuts, or seeds. Increase gradually and drink fluids.

- Stop and ask for advice if fiber worsens symptoms.
- People with some medical diets need individual guidance.

DAY 4: BREAK UP SITTING TIME

Day 4: break up sitting time

Short activity breaks can help many people. Options include walking, standing, chair movement, stretching, or gentle household tasks.

- The CDC describes 150 minutes per week as a common adult activity goal, but starting slowly is okay. [2]
- Ask your doctor which activities are safest.

Try this

Choose one small action from this page and test it for one ordinary day. Keep what helps and adjust what does not.

DAY 5: IMPROVE ONE DRINK

Day 5: improve one drink

Weekly tracker

Day	Water	Meal	Move	Sleep	Mood	Notes
☐	☐	☐	☐	☐	☐	☐
☐	☐	☐	☐	☐	☐	☐
☐	☐	☐	☐	☐	☐	☐
☐	☐	☐	☐	☐	☐	☐
☐	☐	☐	☐	☐	☐	☐
☐	☐	☐	☐	☐	☐	☐
☐	☐	☐	☐	☐	☐	☐

Choose one drink you have often and adjust it. Try less sugar, a smaller size, unsweet tea, water, sparkling water, or a gradual step-down.

- You do not need to love plain water overnight.
- Alcohol and diabetes medicine require safety awareness.

DAY 6: PROTECT SLEEP

Day 6: protect sleep

A realistic sleep routine may include a consistent wake time, dimmer light, less late caffeine, a wind-down cue, and a plan for pain, caregiving, or work shifts.

- Sleep problems deserve care, not blame.
- Ask about snoring, breathing pauses, insomnia, or restless legs.

DAY 7: PREPARE NEXT WEEK

Day 7: prepare next week

Seven-day roadmap

Look back at what helped, what felt irritating, and what was too much. Pick one habit to repeat for another week.

- Keep the habit small.
- Write down one question for a clinician if needed.

HYDRATION TRACKER

Hydration tracker

Track drinks for awareness, not judgment. A beverage inventory can reveal one easy place to reduce added sugar.

- Note water, sweet drinks, coffee additions, juice, alcohol, and timing.
- Ask about fluid limits if you have heart or kidney disease.

Try this

Choose one small action from this page and test it for one ordinary day. Keep what helps and adjust what does not.

MOVEMENT TRACKER

Movement tracker

One balanced meal

☐ vegetables	☐ protein	☐ carb	☐ drink
☐ flavor	☐ fiber	☐ portion	☐ repeat

Record any movement that is safe for your body. Chair movement, stretching, physical therapy exercises, and short walks all count as information.

- Track minutes or checkmarks.
- Pain is a signal to adapt, not push through blindly.

MEAL AND FIBER TRACKER

Meal and fiber tracker

Use this page to notice meals that kept you satisfied. Write the vegetable, protein, carbohydrate, and fiber source when you can.

- Patterns matter more than one meal.
- Use notes, not grades.

SLEEP CHECK-IN

Sleep check-in

Sleep is affected by stress, shift work, caregiving, pain, medications, breathing problems, and mental health. This page helps you notice what is changeable.

- Track bedtime, wake time, naps, caffeine, alcohol, screens, and nighttime waking.
- Bring persistent sleep problems to a clinician.

Try this

Choose one small action from this page and test it for one ordinary day. Keep what helps and adjust what does not.

MOOD AND ENERGY

Mood and energy

Sleep routine timeline

Energy can change with meals, sleep, movement, stress, and blood glucose. A simple mood and energy note can help you see patterns.

- Use words, numbers, or colors.
- Sudden confusion or severe symptoms need urgent care.

OPTIONAL GLUCOSE NOTES

Optional glucose notes

If you monitor glucose, use this page only in the way your care team recommends. Do not chase perfect numbers.

- Record context: meal, medicine, activity, stress, illness, sleep.
- Ask what high or low patterns mean for you.

Try this

Choose one small action from this page and test it for one ordinary day. Keep what helps and adjust what does not.

OBSTACLES AND BACKUP PLANS

Obstacles and backup plans

A gentle weekly reset

Plan for busy days before they arrive. A backup meal, safe movement option, and lower-sugar drink can protect momentum.

- Choose the easiest version.
- Ask family or household members for practical support.

30-DAY CONTINUATION

30-day continuation

After seven days, continue one or two habits. A prevention plan should fit real life well enough to survive an ordinary month.

- Repeat what worked.
- Drop what was unrealistic.
- Add one next step only.

REFERENCES AND SAFETY

References, resources, and medical disclaimer

This guide is for general education only. It is not medical advice, diagnosis, or treatment. Talk with a licensed healthcare professional before making significant changes, especially if you are pregnant, have kidney disease, a history of eating disorder, food allergies, gastrointestinal disease, severe low blood sugar, severe high blood sugar, or other medical conditions.

Do not change medication, insulin, or glucose targets based on this guide. Seek appropriate medical attention for urgent symptoms, including severe hypoglycemia, severe hyperglycemia, sudden confusion, chest pain, trouble breathing, fainting, or seizures.
